# Physician queries just got better.

3M's artificial intelligence (AI) platform now supports the **Epic® NoteReader** clinical documentation improvement (CDI) workflow.

What does this mean for you?

The Epic NoteReader CDI solution can now leverage 3M AI capabilities to automatically provide real-time CDI feedback to physicians at the point of care.

Built for performance

Why is the 3M™ 360 Encompass™ MD System the best choice for computer-assisted physician documentation (CAPD)?

It's simple. **3M 360 Encompass MD:**

1 Uses state-of-the-art natural language processing (NLP). 3M's statistical NLP combines expert-driven rules and knowledge, large-scale data analysis and machine learning.

2 Integrates with the 3M™ 360 Encompass™ System platform. It's a natural addition to the award-winning 3M 360 Encompass System.

3 Has onboard throttle control. Automatically deletes duplicated clarifications for minimal disruption to the physician workflow—further avoiding query fatigue or system mistrust.

4 Incorporates CDI worklist prioritization. Integrates with CDI worklist prioritization algorithms to improve productivity and enhance outcomes.

5 Offers copy/paste risk analysis. Scores the risk-level of copied text and routes the alert to either a reviewer or directly to the provider for action.

6 Has a unified workflow. Unites CDI, coder and CAPD query workflows to streamline processes and enhance productivity.

7 Delivers HCC alerts. Integrates with 3M™ 360 Encompass™ Patient Insights to successfully manage and capture HCCs (hierarchical condition categories).

What are the results?

- Increased query response rate
- Increased query agreement rate
- Improved case mix index (CMI)
- Improved quality scores
- Improved CDI productivity
- Reduced physician response time to queries
- Reduced clinical denials
